- **How to UnInstall Game.** - Run the game as administrator and then click **Uninstall.exe**. Follow the instructions on screen in order to uninstall the game.
- **If you want to use the Game as normal.** - The instant patch will download and install in the background without interfering or changing any files on the computer. Once you have placed the patch you can click on the game and use it as normal. You will be shown a "HINT" screen explaining which files on your computer are the current version, what the latest version is and if you are missing some of the graphic settings. Simply click on the patch button and follow the instructions in order to activate the patch. Note that game and all it's files are left intact and unmodified. No files have been modified or deleted, your files will be left as they were (no matter which version you downloaded). Antivirus apps in the file name will be slightly modified. It is recommended to use an AntiVirus app to wipe out all anomalies that may appear in the file name. Your AntiVirus app should then block all attempts to download the patch but should leave any necessary files that are contained in the patch in place. You will not be asked what to do with any files, they will be left where they are and should not try to remove them. You will be asked to verify that you want to continue, verify your os version, and then the updater will begin downloading and installing the patching package. If you use the feature once you request a second time
