This unprecedented level of player, environment and system data is used to detect and capture all possible scenarios, as well as optimize decision-making, based on the AI's knowledge of its environment, opponents, and past history. For example, FIFA 22 is able to diagnose ball flight patterns, predict trajectories and accelerate the game-engine's anticipation in preparation for the next move. "We have concentrated all of our resources on delivering the best-looking, most realistic ball physics ever seen in a soccer video game," said Mark Hunter, Executive Producer at EA Sports. "And that's only the beginning.

We have given the teams at FIFA a remarkable amount of data that allows their AI to be even more intelligent and react in real-time to the unpredictable and emergent gameplay." The new "HyperMotion" technology introduced in FIFA 22 introduces a new rendering engine that allows EA Sports to create even more realistic goalkeepers by transferring the motion captured player data to a completely new goalkeeper AI. This technology will be available for all supported platforms, including Xbox One, PlayStation 4, PlayStation 3, PC and Nintendo Switch in FIFA 22. FIFA 22 is also the first FIFA to feature new graphical and user experience improvements to cover all modes of the game. These include improved visuals, controls, and responsiveness for high-end machines, and new game modes for FIFA Ultimate Team, where custom content and gameplay moments can be unlocked. The most significant feature of FIFA 22 is the updated FIFA Ultimate Team engine that allows players to customize their ultimate team in an entirely new way. New gameplay elements including the new "Recommended Stars" system will also be available in FIFA Ultimate Team when the game launches. This system notifies players when they are close to obtaining the recommended player in a FIFA Ultimate Team card. This makes it much easier to collect and trade players in FIFA Ultimate Team. FIFA 20 Players can look forward to: The FIFA 20 Team of the Year: New Players, Coaches, Ambience and Loyalty benefits have been added to the FIFA 20 Team of the Year. When in the Team of the Year mode, each team will need to play a number of new challenges to earn the FIFA 20 Team of the Year badge. These new challenges include new specific scenarios that will test the strength and teamwork of each team. New Player Development: New pathways to the next level

FIFA is a series of association football video games created by Electronic Arts. FIFA is a series of association football video games created by Electronic Arts. FIFA is a series of association football video games created by Electronic Arts. What is FIFA? The FIFA series has been arguably the most important competitor to the Pro Evolution Soccer series since Pro Evolution Soccer's release in the early 1990s. It is also the biggest selling sports game series on any platform. The series has sold many million in its various forms, and is currently in its 24th generation. As it is a series of football games, it has several versions with the base game being the basis for later versions. The series was originally released for the Amiga and Atari ST computer platforms in 1990, a year ahead of its eventual release on the Sega Genesis console. The gameplay in the series was developed using the same motion-capture system used in Virtua Cop, known as the Liight Mocap suit, by Virtua Sports. This was unlike the Sega Genesis version of the game, which was developed using a more conventional system called "Move". Virtua Cop: The Animation is a 1995 computer-animated short film which demonstrates this gameplay technology. In the late 1990s, EA attempted to launch a series of new football games with the title of FIFA Street, which would primarily be a series of licensed versions of road, car and skateboard football games. EA failed to launch the FIFA Street series due to poor sales, although EA Sports' attempt at recreating the ball-controls of the Liight Mocap suits was licensed to Konami for their Pro Evolution Soccer title Pro Evolution Soccer 2001. FIFA Street itself only saw release on the PlayStation 2 and GameCube. Beginning in 1997, FIFA has followed EA's sports series tradition of using licences for annual revision. The developers focused on improving the game while using licenses for the game's match-ups. Beginning in 1997, FIFA has followed EA's sports series tradition of using licences for annual revision. The developers focused on improving the game while using licences for the game's match-ups. Starting in 2001, FIFA began to use the "FIFA Universe" (sometimes "FIFA Universe 96") branding. This means that all future releases would be incorporated into the "universe" of games and be treated as part of the same
